## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 7 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Tomura et al. 5,256,955. Tomura et al. discloses a charging communication adaptor for a mobile device, comprising: first charging terminals 36; first communication terminals 22 wherein the first charging terminals are longer than the first communication terminals, and when the mobile device is attached to the charging communication-adaptor, the first communication terminals make a contact with second communication terminals of the mobile device after the first charging terminals make a contact with second charging terminals of the mobile device.

Regarding claim 8, the ends of the second charging terminals are flat and ends of the first charging terminals are convex.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over Tomura et al. It would have been obvious to arrange the terminals for an intended connector, USB etc., since features of an apparatus may be recited either structurally or functionally, claims directed to an apparatus must be distinguished from the prior art in terms of structure rather than function. In re Schreiber, 128 F.3d 1473, 1477-78, 44 USPQ2d 1429,1431-32 (Fed. Cir. 1997).

***Allowable Subject Matter***

Claims 9 and 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 1-6 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: regarding claim 1, patentability resides, at least in part, in the protrusion moving in a certain direction when the first component is pressed down and rotates; and a second arrangement that includes a second component and first communication terminals, wherein the second component is arranged at a certain distance, in the certain direction, from the protrusion, and the second component makes a contact with the protrusion and the first charging terminals make a contact with the second charging terminals before the protrusion moves in the certain direction and starts to press down the second component, and the first communication terminals protrude to make a contact with second communication terminals of the mobile device when the protrusion presses down the

second component and the second arrangement rotates at a certain angle, in combination with the other limitations of the base claim.

### ***Response to Arguments***

Applicant's arguments filed May 11, 2007 have been fully considered but they are not persuasive. In regard to applicant's argument that the terminals of Tomura et al. are not communication terminals, the Examiner disagrees. Applicant has not disclosed any structure that distinguishes applicant's invention from the prior art. Terminals 22 of Tomura et al. "mechanically communicate". Claims directed to an apparatus must be distinguished from the prior art in terms of structure rather than function. In re Schreiber, 128 F.3d 1473, 1477-78, 44 USPQ2d 1429,1431-32 (Fed. Cir. 1997).

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
